Name and Property Modifier Activation Code is a utility that permits to rename and copy files and folders in many ways. It is divided in two parts: Name and Property Modifier, permits to edit a few properties of the selected files and folders without changing the name, and Allows to change the name on the selected files and folders. It will rename, move, copy or move to, even split or merge two or more folders and files. It is possible to perform all these operations without opening the file properties window. It is also possible to view the file properties, set the date and time of the files, or change the name of the selected files and folders. The Modifier is updated with the file properties window with the renaming and copying completed. It has several options and helps you easily and quickly perform any renaming with the desired properties. It is integrated with the Windows Shell by saving the renaming settings. It provides different powershell scripts, which allows to perform renaming or copying with the desired properties (File Properties (Revisited)), also available on the internet. The file properties can be opened and modified with the file properties window. The program can also be a copy from other file to another, even from one or more folders. It can be used to copy and rename files in any folder or save web pages. File to File Transfers (Sync): The program provides three scenarios to perform transfers between folders and files: synchronizing all files in the destination folder, synchronizing a range of dates or specific times in the files of the source folder, and synchronize the files in the source with the files in the destination with the same properties. File or Folder to Folder Transfers: The program provides five modes to perform transfers between folders: copy all files from the source folder to the destination folder, Copy the files in the source to the destination folder but with the same properties, copy all files in the source to the destination with different properties, Copy the files in the source to the destination and rename them all, and Copy the files in the source and the destination and keep their properties. File or Folder to File Transfer: The program provides nine modes to perform transfers between file: the files in the source with different properties, the files in the source and destination and keep their properties, the files in the source or destination with different properties, the files in the source and destination with different properties, the files in the source and destination with different properties, the files 6a5afdab4c
