DAP-2553 AP Manager II Module Incl Product Key Free [32/64bit]

- Display the configuration of your APs. - Allows you to register and manage your new APs. - Allows you to upgrade firmware for the APs. - Allows you to organize your APs into groups (static IP or DHCP). - Allows you to manage the configuration of a wireless network from a central computer (Mac, Windows, or Linux). - Allows you to view all the Wi-Fi protected networks in range. - Allows you to hide or show APs by name. - Allows you to view your AP statistics. - Allows you to change the network name, password, and AP encryption type. - Allows you to change the channel and frequency on APs. - Allows you to change the router password on APs. Benefits 1. It supports Wireless Protected Setup (WPS) automatically 2. It supports QoS (Quality of Service) 3. It supports Wireless Channel Adapters (i.e. AC1900, AC1200, WLAN C, WLAN D, WLAN HD, etc) 4. It supports D-Link DAP-2553 Access Points 5. It supports WPS and QoS 6. It is easy to configure and easy to use 7. It can control the access point AP Features 1. Show and manage the wireless networks in range. 2. Allow the user to view and manage APs on the network. 3. Auto-detect the AP configuration. 4. Enable WPS or AP security. 5. Support 802.1x and WPA/WPA2 6. Support Ad-hoc and infrastructure mode. 7. Support WDS for infrastructure mode. 8. Support AP management. 9. Support AP load balancing. 10. Support AP range. 11. Support channel, frequency, and SSID change. 12. Support WPA and WPA2 encryption. 13. Support password change for APs. 14. Support 802.1x authentication. 15. Support QoS (quality of service) 16. Support both multicast and unicast. 17. Support "Selective Join" for 802.1x authentication. 18. Support WLAN protected device registry for 802.1x authentication. 19. Support dynamic WPA and WPA2 encryption. 20. Support SDIO card for firmware flashing. 21. Support PCI card and

DAP-2553 AP Manager II Module

Designed to provide users with a convenient software tool used to manage your wireless network configuration from a central computer. Features Auto detect your wireless environment Set up all AP settings Update firmware Organize APs into manageable groups Manage AP Channels and frequencies Configure MAC addresses View and edit AP information Detailed information on your wireless environment Easy configuration and set up. Easy to use! Manage and update all AP settings with just one click. Organize APs into manageable groups. View detailed information on your wireless environment. Configuration made from the central computer. Fully featured interface that allows you to view and configure your access points. Manage and update all AP settings with just one click. Update AP firmware. Can be used to configure and manage your APs from any location using a browser. Configure the AP from a central location using the web interface. Access your wireless network from your laptop or any other computer connected to the same network. View and configure your APs in a manageable way. Configure MAC addresses and view detailed information on your environment. Interface designed specifically for this product. Hardware requirements: MS-DOS, Linux, UNIX, Windows 300 MHz processor or greater 128 MB memory or greater 16 MB HDD or greater Internet access Hardware requirements: 400 MHz or greater processor 32 MB or greater memory 25 MB or greater hard drive Compatible hardware These hardware requirements are only for the software module. Note: Specifications are subject to change without notice. Documentation AP Manager II Manual Troubleshooting General information Troubleshooting Not finding the correct AP Check if the AP has been configured correctly. Check the following: Check the "Modules" list to verify if the AP module is present. If you are unsure of the name of the AP module, please contact Customer Service. Check the AP configuration on the page "Page Settings" in the AP Manager II. Disable all of the APs, then enable the AP you are having issues with. If the issue persists, see the following: Access Point "--" Network "0" is up, line protocol is up (connected) Access Point "00-50-c5-82-00-0e-20" not found Access Point "00-50-c5-82-00-0e-20" 77a5ca646e

DAP-2553 AP Manager II Module Crack+

1.D-Link DAP-2553 Basic Configuration: o Set the SSID and WPA mode. o Set the encryption key. o Set the MAC address. o Set the channel. o Set the start time. o Set the roaming on/off. o Change the ON/OFF status. 2.Update the Firmware Version of the AP. 3.DAP Manager II Basic Configuration of the Access Point. o Enter the data to the AP. o Change the Boot Order of the AP. o Monitor the event log. o Monitor the sub-menu. o Monitor the Power Save. 4.Create and delete Groups. 5.Access Point Management. Create, Delete, and Edit the information of a group. 6.Network Information Management. Create, Delete, and Edit the network information of a group. 7.WPS Configuration Management. Change the WPS Configuration. 8.Access Point Association. Select your target access point. the device associated with the access point will be added to the target access point. 9.Access Point Deassociation. Select your target access point, the device associated with the access point will be removed from the target access point. 10.Access Point Login. Manage the login password of the access point. 11.Access Point Configuration. Manage the AP settings. 12.Enable IP Phone Management. Manage the Voice Control settings. 13.Enable or Disable the AP Mode. o User mode o PBC mode o H-Mode (802.11a/b/g/n) o Access Point mode o Wireless LAN and Bluetooth mode 14.Enable or Disable the WPS-PBC. Change the WPS to PBC mode. 15.Enable or Disable the Auto BSSID. Change the Auto BSSID to On/Off. 16.Set the Auto Power Save. Enable or Disable the Auto Power Save. 17.Enter the Status of RTS/CTS Packet in 802.11/EAP. Enter the Status of RTS/CTS Packet in 802.11/EAP/WPA mode. 18.Connect to Access Point. Connect the access point. 19.Change the Security Setting of Access Point. Change the access point to the WPA Mode. 20.Change the Status of

What's New in the DAP-2553 AP Manager II Module?

This AP Manager II module allows you to configure and manage multiple D-Link DAP-2553 access points. AP Manager II is a convenient software tool used to manage the configuration of your wireless network from a central computer. With AP Manager II there is no need to configure devices individually. AP Manager II allows you to configure AP settings, update the firmware, and organize and sort your APs into manageable groups. Features: - Configures multiple DAP-2553 - Manage the following devices: DAP-2553, DAP-2554, DAP-2555, DAP-2556, DAP-2557 - Configures the Access Point - Manage each AP individually - Manage the device's configuration via a web interface or from the Access Point - Manage the device's firmware via a web interface or from the Access Point - Manage each AP separately - Manage the device's static/dynamic IP addresses - Manage the device's DNS settings - Manage each AP's wireless setting individually - Manage each AP's security settings individually - Manage each AP's firmware via a web interface or from the Access Point - Manage each AP's access point name - Manage each AP's SSID - Manage each AP's MAC address - Manage each AP's hostname - Manage each AP's SSID in a manageable group - Manage each AP's SSID in a manageable group - Manage each AP's MAC address in a manageable group - Manage each AP's MAC address in a manageable group - Manage each AP's hostname in a manageable group - Manage each AP's firmware in a manageable group - Manage each AP's SSID in a manageable group - Manage each AP's MAC address in a manageable group - Manage each AP's hostname in a manageable group - Manage each AP's security settings in a manageable group - Manage each AP's SSID in a manageable group - Manage each AP's MAC address in a manageable group - Manage each AP's hostname in a manageable group - Manage each AP's firmware in a manageable group - Manage each AP's security settings in a manageable group - Manage each AP's SSID in a manageable group - Manage each

System Requirements For DAP-2553 AP Manager II Module:

Windows 7, Vista, or XP with Service Pack 3. (Service Pack 2 required for AMD-based computers) Intel Core 2 Duo or AMD Athlon X2 Dual Core Processor 2 GB of memory (1 GB required for AMD computers) DirectX 9.0c compatible video card 20 GB free hard drive space Microsoft.NET Framework 4.0 Supporting documents: To install Minecraft: 1. Run the Minecraft Launcher.2. Click on the "Install" button.3. Follow the instructions to complete
