ImTOO Video Cutter is a software that allows you to divide your videos into shorter files and, if you prefer, merge the parts together again into a single video file. You can extract different sections (based on the aspect ratio) and combine them into a new video file. ImTOO Video Cutter enables you to split or merge video files according to the file size, aspect ratio or year. In addition, you can extract video clips from the files based on the frame number. You can select the start and end time by using a slider. But you can also manually write these values. Furthermore, you can select the duration of the segment (by using the seconds or frames option). The application allows you to choose the video bitrate and language (you can change the interface language). You can also specify the format of the output file (AVI, MPEG, MP4). Plus, you can show the time elapsed since you started the job. There are also various options for creating a preview (increase size, crop, merge, etc.). The program has advanced settings to change the aspect ratio (video size, crop, etc.), the frame number, time offset, and more. These settings are stored in the "settings.xml" file and you can restore them to the default values. In addition, the program checks
