AutoCAD is generally used for drafting and related applications. AutoCAD is widely used in engineering, architecture, interior design, and landscape design. The software has also been used for conceptual design, construction documentation, mechanical design, illustration, cartooning, virtual and augmented reality, and as a component of specialized software for industry (e.g. machining, industrial design, medical imaging, animation, motion-picture design, computer-aided design and manufacturing (CAD/CAM), and various forms of process control), as well as in planning and related fields. AutoCAD is free to use for a single user or for a single organization. One can use it in a single-user mode for creating drawings, viewing and editing drawings, printing and exporting drawings, and sharing drawings with other users. Multiple users can work on a single drawing. A drawing created in AutoCAD can be saved to disk, opened in another drawing or workbook, and printed. A drawing can be linked to other drawings or parts of the same drawing. A drawing can be exported to other formats (e.g. PDF, DXF, DWG, EMF, 3DS, JPG, PNG, etc.). The drawings can be shared with others, on the web, or downloaded to portable media. Features of AutoCAD Autodesk claims to have released the first CAD product which is suitable for large-scale deployment. With the help of AutoCAD, you can create, edit and modify drawings and layouts in the fastest way. You can perform repetitive tasks by using a table of contents. Before AutoCAD, most CAD software required the CAD operator to manually input all drawing details (e.g. data, attributes, dimensions, etc.) The user had to identify parts of the drawing that should be hidden, and to perform complex operations such as deleting objects, moving objects, and translating objects. In AutoCAD, most drawing operations can be performed by selecting and moving objects. This makes it easy to create and modify the drawing. Many drawing operations can be performed at a faster speed by using AutoCAD's intelligent tools. These tools can be automatically activated based on the object or its attribute. When you create a drawing, you can specify objects, text, and line styles. You can create custom attributes and organize them into layers. You can edit the settings of your drawing in a single view, including drawings in other applications.

The professional wrestler has been trying to get over his crush on the Canadian singer ever since they were spotted locking lips and having a little cuddle on the beach, but he admits that he may have to give up if Bieber got a girlfriend. Asked if he'd give up on the singer if he got a girlfriend, Sheamus said: "If he got a girlfriend, I'd probably be pretty, you know, over it. I would give him my number and things like that. "But I'd never date him. I'm not trying to do anything with him. I don't want any of his money." Sheamus also spoke about his recent appearance at the PDC's Fight Night show, which featured him lifting another professional wrestler in an arm wrestling competition. "I don't know if I look half as strong as [the wrestler], I wouldn't want to put myself in that situation," he said. "I was lucky to come out unscathed, luckily. But the next time I see that guy, I'm going to kick his ass." The self-professed alcoholic also spoke about returning to wrestling after a year off, saying he'd like to be able to come home and "sleep in a normal bed", though he admitted that he'd love to work for WWE again. "As crazy as it sounds, I want to go back to the WWE. It's something I've always dreamed of, to say that you're going to do something and you make a living at it,

As India's telecom regulator meets to discuss one of the biggest auctions of radio spectrum in years, the opposition Congress party is demanding that the rules be "made public" before the auctions begin. Rajiv Shukla | AFP | Getty Images Rajiv Shukla Rajiv Shukla The Telecom Regulatory Authority of India is to meet this week to finalize details of the 4G spectrum auction, which is likely to conclude a deal worth around $20 billion. The auctions were called off two years ago due to lack of consensus between the government and the regulator on pricing, resulting in poor demand.
