the application. Photoshop CS3 is comprised of layers. A layer is like a separate, self-contained sheet of paper that you can manipulate on your own at any time. You can also combine layers in any way you like to create your image. Figure 3-9 offers a simple example of layers. If you create the layer by dragging it from the Layers palette, it appears as a grayscale (no color) image. If you change the color of the layer, the image changes accordingly. You can move, scale, change opacity, and rotate the layer at any time. You can also change the layer's name. You can even apply the same color to multiple layers. Just click the Layer palette and select the layers you want to duplicate. Figure 3-10 offers an

In this episode I sit down with Jes Willemsen, a geneticist and the creator of the Design Patterns for Genetic Testing project. She is also on the board of Directors for the CLAD project. Listen to learn about Design Patterns for Genetic Testing and the CLAD project and how they are changing the world of genetic testing. I'm really excited to be a part of the #fecesment project with my friend Samer Nazzal. He's a Children's Neurology doctor who lives in Washington DC, and I worked at Children's for awhile. We both love medical illustration, taking old hospital posters and digitally converting them into beautiful pieces of art. We'll be posting our old favorites on Instagram and will be donating a portion of the proceeds to the CHERUB program. You can follow us on Instagram here: @fecesmentproject

The complex processes of the human body can be mind-boggling, but they don't have to be. I sit down with one of the leading experts in the field, Dr. Jeff Parson, from the University of Kentucky to give some basic anatomy knowledge to help you understand what you are seeing in your genetic testing. Welcome to another episode of the PhD Historian podcast! In this episode I am joined by David Barnes to discuss some of his recent research into the prevalence of ASD within the US military during WWII. Our interests are broad. The surname database appears to be growing at an exponential rate with an estimated 20 million "bogus" names causing problems for genealogists and family history researchers. However, it's not just the names that are causing a problem. Not all PhDs are published, and even those who are published face a variety of problems. Just because someone has a PhD doesn't mean their research is published. Just because they

[Fibroblast growth factor 19 (FGF-19): FGF orthologues and function in human]. Fibroblast growth factor 19 (FGF-19) is a gene of the fibroblast growth factor (FGF) superfamily and regulates hepatic bile acid synthesis and energy metabolism. Its gene expression is regulated mainly by a cAMP-dependent pathway, likely mediated by farnesoid X receptor (FXR). In contrast, a glucocorticoid-responsive and PXR-dependent pathway is involved in the transcriptional regulation of hepatic Fgf-19 expression. The mouse and rat Fgf-19 orthologues are much less active than human FGF-19. Human FGF-19 is a potent inhibitor of CYP7A1 in both human and mouse hepatocytes. This suggests that FGF-19 controls cholesterol homeostasis in both species, but also more broadly including steroid hormone metabolism. Mutations in the FGF-19 gene are

associated with sitosterolemia and hypertransaminasemia, and are linked to juvenile polyposis, suggesting an important role for FGF-19 in bile acid and cholesterol homeostasis in humans.Q: Spark: Unable to see current running application on cluster I am trying to see which Spark application is running on my cluster. When I have a single Spark application running without Master, the only one Spark application is shown as current on my sparkUI dashboard. If I have multiple Spark applications running as a cluster, I can see the list of Spark application as current on my SparkUI, but they are not connected as a cluster and both Spark application can be seen on different nodes in the cluster. Is there any way to get the current running Spark application as a cluster in Spark UI? A: Is there any way to get the current running Spark application as a cluster in Spark UI? This is not possible. [I can see the list of Spark application as current on my SparkUI This depends on the use case. If you look at a distributed cluster, you can see the clustered (not masterless) application. If you have an interactive, interlinked application, you can use `getActiveSelectedSharedState` to get the application in use in the cluster.
