If you like Game of Thrones, but with a British sense of humor, then you're going to love Dauntless. The book opens with a prologue in which Amity Colton is going to marry Drake Wayland, the man of her dreams. In the morning, however, she awakes to find herself bound and gagged, and her husband lying next to her, dead from a gunshot wound. Amity begs for help but no one is willing to believe that she isn't lying, because everyone has something to hide. There are secrets surrounding her husband's sudden death, and the robbery on the Colton family estate. Amity is left to fend for herself and seeks out a kindred spirit in a group of dwarves. They take her in, and together they try to unearth the truth. The most important thing I am trying to accomplish is to remote control my computer through a TV or monitor connected to my laptop, with my phone acting as the remote control. Before Vectir, I was using a remote control program that worked perfectly but it also included a lot of extra features I did not need. In my younger days, I played with such devices as a Logitech Harmony remote that, like Vectir, is a PC-controlled remote. I would prefer to use the device if it is not complicated. Many of the other apps are too complicated. Vectir Free is the only reasonable choice that I have seen so far. Vectir looks easy to use. I have seen nothing yet that has been as complicated as most of the others I have seen. Anyone know of a solution? A: Someone asked the same question in the forum also. In an answer they said the following (my own translation): You can use the Vectir activation key on any windowed or fullscreen game. The activation key is already used by the

game, but it's still possible to use the app if you have the right license (which you also have to buy). Most games offer a direct connection, but not all. So you can use Vectir without having a paid license. A: Vectir works on Windows 7+ (This is a common mistake made by a lot of people on whether it works on Windows 8 or not, this a common answer on the forums, but the correct answer is that it works on Windows 7+).
