[PS3] Rogero Downgrade Any CFW Version To 3.55.18

Rogero Downgrade any CFW version to 3.55.18 A: You can purchase

software-only for your PS3 and use that to get the downgrade! Since the downgrade to 3.55 won't void your warranty you won't need a Sony repair. A simple Google search will turn up companies selling firmware-specific software. A: the best answer(until now) for me was the guide provided by kkr73 that allows you to buy any firmware version, but i had to buy that via website and pay those high prices to it. Q: JsonGenerator: store the result of a method in a String I am currently using Java's JsonGenerator to write json into a byte stream. At this point the JsonGenerator object has its own method toString which produces a string that has escaped quotes. The method also escapes

backslashes, because strings are quoted while writing. For me it is not necessary to store those escaped strings into Strings in order to print them again when reading the data. I would like to return a simple String instead of printing. The question is now how I can store the result of the method toString into a String. As an example, here is the code:

```
public class JsonExample
{ public static void main(String[]
  args) throws IOException {
    JsonGenerator json =
    Json.createGenerator(new
    ByteArrayOutputStream());
    json.writeStartObject();
    json.write("\"a\"", String.class);
    json.writeNumber("5");
    json.write("end"); json.flush(); Syste
```

m.out.println(json.toString(String.class)); System.out.println(json); } } I would like to write this to a stream (byte[]) instead of printing out each object or a whole String. The information is stored in a variable called json. I am using Java's JsonGenerator here because it should be possible to send the json object to a REST Web Service using HttpClient. c6a93da74d
